

Android app to control Robot: I developed this android app that helps select a destination location for a robot. The App connects to Node.js server using REST API architecture. It posts a request to the robot and scans for other incoming requests from the robot for a path.

Disaster Management App: Finalists, Manipal Hackathon 2020. Developed a solution to scrape twitter data and performed Sentiment analysis on tweets during disasters to identify cries for help and locations using a NodeJS backend. Natural Language Processing performed by Wit.Ai and Android client connected to server using REST API displayed using Maps API.
